

Experience

Backend Developer

CloudTechTiq

Oct 2024 – Present

- Architected a multi-tenant SaaS platform on **Django REST Framework** and **PostgreSQL**, combining row-level data isolation, MFA, and role-based access control into the platform's permission model; onboarded 15+ enterprise tenants with zero security incidents to date.
- Engineered AI-powered support features (grammar correction, response suggestions) used by support agents in daily ticket handling, cutting average resolution time by 35% across a platform serving 1,000+ enterprise clients.
- Designed a real-time notification pipeline with **WebSockets**, **Celery**, and **RabbitMQ**, with email/SMS fallback and retry handling, achieving a 99.5% delivery rate for 3,000+ daily active users; instrumented end to end with **Datadog** dashboards and alerts.
- Reduced queue processing time by 60% by decoupling report generation and scheduled jobs from the request cycle and migrating them to async **Celery** workers on Redis and **AWS Lambda**.
- Spearheaded API security hardening across multiple product lines (**OAuth 2.0**, rate limiting, input validation), coordinating the rollout with frontend and DevOps teams.

Backend Developer

Radixlink

Jun 2023 – Sep 2024

- Built an AI-driven invoice automation system on **FastAPI** that extracts, validates, and structures invoice data, eliminating manual entry for hundreds of weekly transactions and reducing processing errors by 70%.
- Established the CI/CD pipeline with **GitHub Actions** and **pytest** (85%+ coverage), gating merges on automated test and build stages; cut release cycles from 2 weeks to 3 days and deployment errors by 50%.
- Designed a centralized auth microservice handling login, token issuance, MFA, RBAC, and **Stripe** payments; containerized with **Docker**, deployed on **AWS EC2**, and adopted as the SSO gateway by 3 internal products.
- Improved p95 API response time from 800 ms to 450 ms across high-traffic endpoints by profiling slow queries, optimizing **PostgreSQL** access patterns, and adding targeted indexes.
- Implemented disaster recovery via automated **PostgreSQL** backups to S3, failover configurations, and restore procedures, sustaining 99.9% uptime over 12 months of production operation.

Education

Bachelor of Computer Applications (BCA)

Bundelkhand University

Jul 2021 – Jun 2024

- Built an AI-powered news summarizer in Python as an academic project, condensing full-length articles into short digests.

Projects

Namecheap Python SDK

github.com/alzywelzy/namecheap-wrapper

- Designed and published an open-source SDK for the Namecheap domain-management API with async **httpx** transport, **Pydantic** model validation, and XML-to-dict response parsing; distributed via PyPI.
- Supports domain registration, DNS management, and availability checks with clean separation of transport, serialization, and domain-logic layers; includes a pytest suite with coverage reporting and environment-based configuration for sandbox and production endpoints.

Technical Skills

- Languages:** Python, SQL, TypeScript, JavaScript, Bash
- Backend:** Django, Django REST Framework, FastAPI, Flask, Celery, SQLAlchemy, Pydantic, REST & GraphQL API Design, Microservices, asyncio, WebSockets, Event-Driven Systems
- Frontend:** React, Next.js
- Databases:** PostgreSQL, Redis, MongoDB, MySQL
- DevOps & Cloud:** AWS (EC2, S3, RDS, Lambda, CloudWatch), Docker, GitHub Actions, GitLab CI, CI/CD Automation, NGINX, Linux
- Messaging & Monitoring:** RabbitMQ, Datadog, Sentry, Prometheus, Grafana
- Security & Payments:** OAuth 2.0, JWT, RBAC, MFA, Rate Limiting, Stripe API
- Testing & Practices:** pytest, TDD, Unit/Integration/E2E Testing, Code Reviews, Agile/Scrum
- Familiar With:** Kubernetes, Terraform, Kafka, Elasticsearch
