Experience

DevOps Engineer **CloudTechTiq** Nov 2024 – Present

- Owned the **Docker Compose** topology for the whole console: 35 services across the Django portal, CloudStack and billing microservices, Celery workers/Beat, PostgreSQL, Redis, **RabbitMQ**, MinIO, NGINX and the observability stack, with a single idempotent `make dev` that rebuilds only on changed build inputs (~4 s warm start).
- Built **GitHub Actions** pipelines that gate on pytest, then build multi-stage **Docker** images and publish to **GHCR** per environment (dev/staging/prod), with a separate migrations workflow and container health checks behind **Gunicorn** + NGINX.
- Built the observability platform: **OpenTelemetry** SDK instrumentation (FastAPI, SQLAlchemy, Redis, Celery, httpx) through an OTel Collector and Grafana Alloy into **Prometheus**, Loki and Tempo, so any failure traces to a single request across services.
- Split background work across **Celery** workers on **RabbitMQ** and Redis (handlers, relay, jobs, billing queues plus Beat), with late-ack and worker-lost requeue so no provisioning or billing task is silently dropped.
- Built an OAuth2/OpenID authorization server and **FastAPI** gateway to **Apache CloudStack** for VMs, volumes, networks and templates, with webhook-first state sync, a polling fallback, and live job progress streamed to clients over **SSE**.
- Built a service-provisioning engine that tracks each order through its lifecycle across seven service types, automating bare-metal setup over an HPE iLO Redfish wrapper and Celery-driven IP allocation.
- Architected a multi-tenant hosting and billing/ERP SaaS on **Django REST Framework** spanning 25+ apps and 230+ ViewSets under a unified `/api/` namespace.
- Designed a dual-gateway payment system (**Razorpay** + **Stripe**) with HMAC-SHA256 webhook idempotency to prevent duplicate charges, coordinating payment, invoicing, provisioning, and double-entry ledger reconciliation, plus Indian GST e-invoicing (EINV-2.1) through the NIC gateway with IRN generation and signed QR codes.
- Ran edge and cloud infrastructure: Cloudflare DNS/Pages/Workers, SPF/DKIM/DMARC mail, uptime monitoring, and deployments evolving from a **GCP** VM on single-node **Docker Swarm** with auto-rolling image updates to serverless, weighing cost, limits and operability.
- Planned service migrations and cutovers with written runbooks (a check and a rollback per step), architecture decision records, and a test-parity gate so every existing test is ported or explicitly dropped before release.
- Designed scheduled and queued background work with leases, heartbeats, retries and dead-letter queues so failed jobs surface instead of disappearing.
- Made local environments reproducible with `pg_dump` seed snapshots, code-defined reference data (chart of accounts, tax rules, FX rates) and Alembic/Django migrations applied automatically on start.

Education

Bachelor of Computer Applications (BCA) **Bundelkhand University** Jul 2021 – Jun 2024

- Built an AI-powered news summarizer in Python as a final-year academic project, using the OpenAI API to condense full-length articles into short, readable digests.

Technical Skills

- **DevOps & Cloud:** Docker, Docker Compose, Docker Swarm, Kubernetes, GitHub Actions, GHCR, NGINX, Gunicorn, Linux/systemd, AWS (EC2, S3, RDS, Lambda), GCP, Azure, Cloudflare (Workers, Pages, DNS), Apache CloudStack
- **Observability & Testing:** OpenTelemetry, Prometheus, Grafana, Loki, Tempo; pytest, Vitest, Playwright, CI/CD
- **Languages:** Python, TypeScript, JavaScript, SQL, Bash
- **Backend:** Django, Django REST Framework, FastAPI, Hono, Celery, SQLAlchemy, Drizzle, Pydantic, Zod, WebSockets, SSE
- **Data:** PostgreSQL, Redis, MySQL, MongoDB, Cloudflare D1/R2, RabbitMQ, Alembic
- **Security & Payments:** OAuth2/OpenID, JWT/JWKS, WebAuthn/passkeys, 2FA/TOTP, RBAC, HMAC, Stripe, Razorpay
