Experience

Frontend Developer **CloudTechTiq** Nov 2024 – Present

- Built the customer and admin console in **React** 18 + **Redux Toolkit** and Vite across 35+ feature modules (billing, orders, CloudStack, tickets, roles, tax and payment settings), with react-hook-form validation and ApexCharts dashboards.
- Shipped an in-browser VM console on **xterm.js**, Razorpay checkout, Microsoft sign-in via **MSAL**, Cloudflare Turnstile, impersonation and DOMPurify-sanitised rich content, behind axios interceptors with retry and JWT refresh.
- Built the Workforce HR web app in **React** 19 + **TypeScript**, Vite and Tailwind v4 with i18n, a documented design system, and Vitest + **Playwright** tests, served from an NGINX container.
- Built the company's marketing site in **Next.js** + TypeScript with Tailwind and Radix/shadcn components, including product pages for cloud, Kubernetes and dedicated-server offerings.
- Architected a multi-tenant hosting and billing/ERP SaaS on **Django REST Framework** spanning 25+ apps and 230+ ViewSets under a unified `/api/` namespace.
- Designed a dual-gateway payment system (**Razorpay** + **Stripe**) with HMAC-SHA256 webhook idempotency to prevent duplicate charges, coordinating payment, invoicing, provisioning, and double-entry ledger reconciliation, plus Indian GST e-invoicing (EINV-2.1) through the NIC gateway with IRN generation and signed QR codes.
- Secured the platform with RS512 **JWT** auth (kid-keyed JWKS, refresh-token rotation over HTTPOnly cookies), a 2FA flow over email OTP and RFC-6238 TOTP, and a 43-permission department-scoped RBAC.
- Built offline-first **React** 19 + TypeScript PWA patterns with TanStack Query and an IndexedDB outbox that replays writes on reconnect, tested with Vitest and **Playwright** end-to-end suites.
- Shipped fast static web surfaces (**Next.js**, **Astro**, Tailwind) with a strict CSP, JSON-LD, generated OG images, Lighthouse CI budgets and visual-regression tests in CI.
- Built typed **TypeScript** API layers with schema-validated contracts (**Zod**/Pydantic), OpenAPI specs and module-boundary checks, keeping frontend and backend in lockstep.
- Shipped real-time notifications over a **Django Channels** 4 + Redis WebSocket server with JWT-authenticated async consumers, backed by a 24-task **Celery** system (late-ack, worker-lost requeue).
- Containerized and shipped the platform through multi-stage Docker images and a GitHub Actions pipeline publishing to GHCR.

Education

Bachelor of Computer Applications (BCA) **Bundelkhand University** Jul 2021 – Jun 2024

- Built an AI-powered news summarizer in Python as a final-year academic project, using the OpenAI API to condense full-length articles into short, readable digests.

Technical Skills

- **Languages:** Python, TypeScript, JavaScript, SQL, Bash
- **Frontend:** React, Next.js, Redux Toolkit, TanStack Query, Vite, Astro, Tailwind CSS, Radix/shadcn, PWA/IndexedDB
- **Backend:** Django, Django REST Framework, FastAPI, Hono, Celery, SQLAlchemy, Drizzle, Pydantic, Zod, WebSockets, SSE
- **DevOps & Cloud:** Docker, Docker Compose, Docker Swarm, Kubernetes, GitHub Actions, GHCR, NGINX, Gunicorn, Linux/systemd, AWS (EC2, S3, RDS, Lambda), GCP, Azure, Cloudflare (Workers, Pages, DNS), Apache CloudStack
- **Security & Payments:** OAuth2/OpenID, JWT/JWKS, WebAuthn/passkeys, 2FA/TOTP, RBAC, HMAC, Stripe, Razorpay
- **Observability & Testing:** OpenTelemetry, Prometheus, Grafana, Loki, Tempo; pytest, Vitest, Playwright, CI/CD
